FULL-STACK DEVELOPMENT

Logistics & Fleet Management System

FastAPI + React High-Performance Operational Ecosystem

PROJECT OVERVIEW

The Challenge

Automating traditional logistics for field services. Built a real-time coordination system that eliminates manual errors and optimizes fleet movement.

The Solution

Developed a secure, scalable platform with a unified dashboard for drivers and admin, featuring geo-fencing and automated task assignment.

TECHNICAL EXCELLENCE

Advanced Geolocation

- Nominatim-based zone detection.
- Polygon geofencing for pricing.
- Route clustering for drivers.

Security & Core

- State-of-the-art JWT auth.
- Action Audit logging for traceability.
- PostgreSQL / PostGIS integration.

CORE TECHNOLOGY STACK

FastAPI | React | TypeScript | SQLAlchemy | PostgreSQL | Docker | PostGIS

Built with Secure Development Principles. Let's build your next project together.
